Located near Longview, Texas, Eastman Chemical Company's Texas Operations facilities occupy less than 1000 acres of the company's 6,000 acres. The unused acreage supports a rich ecosystem including bottomland hardwood, pine forest, grasslands, marsh, and water bodies. This undisturbed acreage is home to a wide variety of native animals, birds, and plants. Eastman is also an important stopover point for many species of birds migrating along ancient pathways in the sky.
